## Enclosure Powder Coat Colors

Tramont Manufacturing generator enclosures receive a powder coat finish for maximum durability in all types of weather conditions. The pigment is applied as a dry powder and then baked on to create a smooth, seamless shell. All Tramont steel, stainless steel, galvaneal and aluminum enclosures are powder coated in a texture finish. Gloss finish available as an option.

Tramont offers the standard powder coat colors shown below. Custom colors are also available.

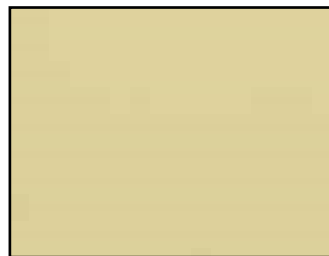

**IMPORTANT:** Colors are approximate and are for general reference only. Contact Tramont Manufacturing if you require actual powder coat samples.
