

Tramont Corporation Day Tanks pre-approved by os**h**pd for California Healthcare Facilities

Tramont has achieved OSHPD Special Seismic Certification Pre-Approval for Fuel Day Tanks — 10 through 350 gallons.

OSHPD is the Office of Statewide Health Planning and Development, one of 13 departments within the California Health and Human Services Agency, which administers programs that endeavor to implement the vision of “Equitable Healthcare Accessibility for California.”

The Tramont OSHPD approval process began with finite element analysis to design equipment that could withstand seismic activity. Then Tramont put our analytical design results to the test in a series of shake-table tests to simulate actual earthquakes to verify that the equipment will remain intact and functional following a seismic event. Finally, Tramont and its third-party approval partner applied for and received pre-approval with OSHPD.

Tramont OSHPD Pre-Approval File OSP-0254-10 certification includes:

- IBC Seismic Certification pursuant to ASCE 7
- UL 142 Secondary Containment Day Tank (rigid base mounted)
- 10 through 350 gallon Fuel Day Tanks with System 2000 PLUS Electronic Control Module
 - Single (non-redundant) and duplex (redundant) pump control
 - 2 through 30 GPM supply or return pump systems
- Packaged Pump Set for remote pump applications
- Multiple option configurations
